➔ New Vauxhall/Opel Astra G additions (1992-2004)

This week we have added a couple of new parts for the Vauxhall/Opel Astra G.

Also known as Chevrolet Astra/Viva, Holden TS Astra and Opel Astra Classic

We have added a new rear beam mounting and some new sizes of anti roll bar bushes.

The complete listing is available [here](#).

➔ PFR80-815

This new [rear beam mounting](#) has been designed to reduce the rear steering effect that the standard rubber bushes have built in.

This is often done by manufacturers to introduce understeer in a car.

But reducing the geometry changes under higher loads does make the limit handling more predictable.

In addition, as the stock bushes wear this geometry change increases making the standard car problem worse.

Another [mad cycle video](#) for you this week.

This is quite the most amazing downhill I have ever seen.

Well worth 4 minutes of your time, watch out for the dog at 35 seconds!

It is from Valparaiso in Chile which is built on an incredible steep hillside so I cannot imagine the speeds this guy is getting up to.
