➔ Subaru Forester Subframe Bushes

[PFR69-720](#) and [PFR69-721](#) are new inserts made specifically for the [Subaru Forester SH](#) mid 2008 on. Basically the same design as the [2011 Impreza](#) but the [Forester](#) uses a spacer on top of the subframe to raise the body, the spacer has a ring that protrudes which the new inserts accommodate.

The inserts limit the movement of the subframe giving an improved positive feel to the rear end under cornering.
