

The Advance Tapes Range

Hundreds of tapes
for thousands of
applications

Advance Tapes International Limited was founded in 1964 and has always been a specialist adhesive tape manufacturer.

Throughout the 70's and 80's, Advance pioneered the use of specially manufactured types of fabric for cloth tapes.

In 1986 Advance became the first tape company to gain BS5750 accreditation.

During the 90's, Advance completed the build of a customised production facility for electrical insulation and protection tapes. Today, Advance continues to manufacture cloth, PVC, foil, double-sided and polyethylene tapes in the UK at two sites in Leicester.

Technical expertise and the continuous development of new products have helped Advance to supply adhesive tapes conforming to the highly demanding specifications required by many specialist industries.

Advance is now extending its enviable reputation for product quality across a wider range of specialist tapes and is constantly investing in developing a better level of service to customers.
